

Fiberglass Solutions

For 23 years C.F. Maier Composites, Inc. has specialized in the manufacturing of fiberglass (FRP) component parts. While serving an array of industries, we have been able to offer our knowledge and design solutions for tanks that require a very specific manufacturing process.

Our manufacturing involves aquaculture tanks, RV bodies, sail boats, recreational structures, fiberglass buildings, trailer bodies, underground utility vaults, and many other unique and purposeful parts.

FIBERGLASS STOCK TANKS

Do Rusty Stock Tanks Look Familiar?

While most metal tanks will **rust** and may bend out of shape during their lifespan, *fiberglass stock tanks will not* corrode even in the most extreme weather conditions.

For over 20 years, C.F. Maier has produced various fiberglass tanks both in ground and above ground including swimming pools, fish ponds, aquarium tanks and hazardous waste containers. All products have been manufactured to last outdoors.

The Stock Tank has been introduced to our line of products and made to cater the needs of livestock owners.

Sizes	Gallons
4'X2'	190
8'X2'	750
16'X2'	3000
22'X2'	5680

The finished product offers:

-  Gelcoat for UV protection.
-  Meets NRCS regulations.
-  Float boxes available.
-  Requires no on-site lamination
-  The tank will bolt together

** Please note: the product ships from Lamar, CO, zip code 81052.*

Fiberglass Advantages

-  The most notable advantage that fiberglass stock tanks offer to livestock is its high resistance to corrosion- meaning, the tanks will not rust.
-  Fiberglass products are perfectly suited for outdoor use because they are made to handle extreme weather changes all year long.

-  The production process requires that fiberglass goods are manufactured for high stress and high impact use. This makes fiberglass products highly durable.
-  Fiberglass stock tanks require minimal maintenance and are also very easy to move.
